#### TECHNICAL DATA

##### **Coffee Table, 2014**

Material: **Balsa wood & Glass top**

Finish: **Acrylic varnish**

Dimensions **Ø: 1200mm, H: 394mm**

Maker-Designer: **Tuomas Kuure**

Special Edition limited to 5

#### DESCRIPTION

Lethal experiment. The table of trisymmetric main form has six unique cliff faces. They are surrounding the centrepiece consists of 16 small peaks which are protecting the ultimate challenge in the middle. The jagged cracks on the cliffs are created as a result of a natural, unduplicable method of breaking the material.

#### SOLID WOOD

Balsa lumber is very soft and light, with an open and beautiful grain. Because it is low-density but high in strength, balsa is a very popular material for light, stiff structures in model bridge tests, model buildings, and for the construction of model aircraft - especially free flight model aircraft. However, it also is valued as a component of full-sized light wooden aeroplanes.

#### MAINTENANCE&CARE

As the finishing used for Lethal Experiment art furniture by Tuomas Kuure is cover with acrylic varnish we recommend using a wet cloth for cleaning to keep the wood clear, shiny and good looking.

Damage repair: Small Scratches can be smoothed by sanding in the direction of the grain using grit 220 sandpaper. Repeat the varnish treatment after sanding.
